

<p><b>Course Name:</b> <b>KNPE 449/3.0</b></p> <p>Advanced Protein Metabolism</p>	<p><b>Course Instructor:</b></p> <p>Dr. Chris McGlory</p>	<p><b>Contact Hours:</b></p> <p>Lectures: 1 x 3 hrs / 12 weeks</p>										
		<p><b>Prerequisite:</b></p> <p>Level 4 in a KINE Specialization Plan</p>										
<p><b>Course Description:</b></p> <p>The aim of this course is to provide a basic understanding of the biological factors that regulate the size of human skeletal muscle. Specific emphasis will be placed on how nutrition and exercise affect skeletal muscle growth/loss in both the athletic and clinical setting. Students will be provided with insight into the use of isotopic labeling of amino acids and other contemporary laboratory-based techniques used to study human skeletal muscle protein turnover.</p>		<p><b>Exclusion:</b></p> <p>KNPE 493 topic ID: Advanced Protein Metabolism (W'20; W'21)</p>										
<p><b>Intended Student Learning Outcomes:</b></p> <p>By the end of this course students will be able to;</p> <ul style="list-style-type: none"> <li>Identify key factors affecting human skeletal muscle protein turnover.</li> <li>Critically evaluate strengths and weaknesses of study designs related to experimental research.</li> <li>Independently develop an experimental approach to address an existing knowledge gap in the nutritional and exercise sciences.</li> </ul>		<p><b>Course Texts:</b></p> <p>NOTE: Nutrition software package: estimated cost \$75.</p> <p><b>Course Evaluation:</b></p> <table data-bbox="938 1140 1331 1318"> <tr> <td>Journal Club Article</td> <td>25%</td> </tr> <tr> <td>Mid-term 1</td> <td>15%</td> </tr> <tr> <td>Mid-term 2</td> <td>15%</td> </tr> <tr> <td>Grant Proposal</td> <td>25%</td> </tr> <tr> <td>Presentations</td> <td>20%</td> </tr> </table>	Journal Club Article	25%	Mid-term 1	15%	Mid-term 2	15%	Grant Proposal	25%	Presentations	20%
Journal Club Article	25%											
Mid-term 1	15%											
Mid-term 2	15%											
Grant Proposal	25%											
Presentations	20%											
<p><b>Course Outline</b></p>												
Introduction and course overview	Fatty acids and skeletal muscle											
Amino acids and metabolic tracers	Molecular control of skeletal muscle mass											
Resistance exercise and protein nutrition	Mitochondria and skeletal muscle											
Exercise, Sex, and Hormones	Muscle atrophy
